

ABSTRACT

Information processing apparatus, particularly a  
plane display unit used both for a display and an  
5 inputting device is required to be small-sized when it is  
attached to a housing. For this purpose, a flat  
rectangular plane display unit (5) is attached to the  
housing (4) by means of fixing members (12, 13) at three  
positions; left and right sides and an upper central  
10 position. The left and right sides of the plane display  
unit (5) are fixed to a back cover (4) with screws using  
the fixing members (12) and the upper central position of  
the plane display unit (5) is clamped by the fixing  
member (13) to be fixed to the housing.
